

Blue Channel v.1 is a Digital Tube Channel.

A standard mixing tool that every engineer needs (compressor and equalizer with Valve Tube Style Character).

The flows are Filter (HPF and LPF) → Compressor → Equalizer → Valve Tube Style.

Click Blue Compressor Label to go to Valve Tube Style section and Vendor information.

The Filter “Q” are -3db point and -6db point.

Note:

Avoid Peak as possible, from your signal input to output signal of the plugin and TRUST YOUR EAR.

All the Default setting is the recommended starting point of the sound. Turn down your audio system volume to prevent any damage.

Big thanks to Christian Budde Analyzer, Ernst Hot's, any digital recording forum, literature on internet and people who direct and indirect help me!

And... Enjoy the PRESET!

Blue Channel v.1 is design by ronaldpassion@yahoo.com,
