

Bad Vox v.1 is a Tube EQ for Vocal.

Another straight forward solution for Vocal Track to save your time!

The Q is -3 db points.

All freq bases on Manley Hardware Vox Box (Only the EQ).

Note:

Avoid Peak as possible, from your signal input to output signal of the plugin and TRUST YOUR EAR. All the Default setting is the recommended starting point of the sound.

Turn down your audio system volume to prevent any damage.

Big thanks to Christian Budde Analyzer, Ernst Hot's knob, Ronnie & rekkerd.org, people in kvraudio.com forum, any digital recording forum, literature on internet, everyone give me critic comment & suggestions and people who direct and indirect help me!

Enjoy the Presets!
