SS500 Guitar Preamp v.1 is VST Rock Guitar Preamp.
Solid State Focus!!!

*"After a thousand reading, a thousand try and error, a thousand emotions, a thousand seconds in front of computer and "**This is it**" → My 8 months dream, Guitar Preamp!"* **Ronald, for the love of the sounds**.

BASS, MIDDLE and TREBLE: 0 to 10 levels.
MID Freq range: 750 Hz to 2.25 KHz.
DRIVE range: 0 to 10 levels. Dry to Wet.
MASTER range: 0 to 10 as level out of the preamp/master output.

Note:
Avoid Peak as possible, from your signal input to output signal of the plugin and TRUST YOUR EAR.
All the Default setting is the recommended starting point of the sound. Turn down your audio system volume to prevent any damage. And ALWAYS REMEMBER, this is a GUITAR PREAMP with no CABINET MODEL!

THE BEST OF IT → SS500 Guitar Preamp v.1 is totally free! Do not SHARE the plugin without this documentation/manual and do not RESKIN/SELL the plugin. Enjoy the presets; tell me if you have another nice setting.

Big thanks to Christian Budde Analyzer, any digital recording forum, literature on internet and people who direct and indirect help me!
Sorry to say: this is my last plugin. Making guitar preamp is my aim! Other plugins are my experiments to get this sound. Thanx to Nick Crow for Wagner Gear and JCM 900 Simulanalog → My inspirations!

Note: DO NOT SPAM or HI JACK MY EMAIL! DO I MAKE MISTAKE?

"DONATION is WELLCOME!!!"
